

Kidney Drainage

Kidney Drainage assists protease in eliminating excessive waste from the kidneys.

SUPPORT FOR YOUR KIDNEYS TO ELIMINATE METABOLIC WASTE!

SUPPLEMENT FACTS		
Serving Size 20 Drops		
Amount Per Serving		% Daily Value
Asparagus cochinchinensis	- mg	*
Goldenrod (Solidago canadensis)	- mg	*
Buchu (Barosma betulina)	- mg	*
Juniperus communis	- mg	*
Glycerine	- mg	*
*Daily Value not established		

Store tightly in a cool, dry place. Keep out of reach of children

1 Ounce per bottle.

Recommended Usage: Take 20 - 30 drops of extract in a small amount of water between meals 3 - 4 times daily. Store tightly sealed in a cool, dry location. Keep out of reach of children.

Many factors can adversely affect kidney function, including nutrition intake, fluid intake, hormone production, and stress. Once these vital organs lose a portion of their filtration and purification ability, toxic substances that can easily poison the body will build up very quickly. Therefore, KIDNEY DRAINAGE has been created with the sole intent of helping the kidneys perform their normal daily function - the filtration of waste from the blood. The removal of toxic metals, the processing of xenobiotics, and even the maintenance of internal pH all depend upon the health and longevity of these two organs. Because of the constant, daily stress that is placed on these organs, optimal nutritional support is crucially essential for the best possible care of these structures.

Indications:

- A need for detoxification
- Infections
- Frequent colds or flu
- Edema
- Following trauma
- Lymphatic swelling
- Lymphatic congestion

The main function of the kidneys is to maintain a level of consistency between fluids and the entire internal environment. In this sense, the kidneys have often been compared to a water filtration and purification plant that takes waste out of water, thus turning it into drinkable fluid. The kidneys are almost always taken for granted until they malfunction, which would cause a build-up of metabolic waste that can quickly

poison all of the surrounding tissue. Each and every day, the kidneys filter nearly 200 liters of fluid from the bloodstream, thus allowing toxins, metabolic wastes, and excess ions to be excreted while simultaneously reabsorbing crucially needed metabolic by-products. These two bean-shaped structures also regulate the volume and chemical composition of the blood by helping maintain osmolarity and acid-alkaline integrity. Additionally, the kidney may also perform acts of glucose anabolism (rivaling that of the liver), hormone production, and even enzyme synthesis.

Component Benefits:

Kidney Drainage is a certified organic, concentrated, rapidly-assimilated herbal product that assists the kidneys to eliminate metabolic waste. This product was scientifically formulated to aid in the balance of the biological terrain: the underlying cause of all biochemical imbalances

Asparagus Officinalis increases the rate of cellular activity, thereby increasing the rate of urine production.

Goldenrod (Solidago Viraurea) has been shown to be effective for nephritis and is especially helpful for clearing up dark and cloudy urine.

Juniperus communis is an excellent diuretic with anti-microbial properties

Buchu (Barosma Betulina) is a diuretic and urinary antiseptic that is helpful in genito-urinary system infections.
